

# E.S → Environmental Laws

## Lecture - 3

# Imminent Challenges India have

- Inadequate sewage treatment
  - Inadequate treatment of effluents from small scale Industries and unorganised sector.
  - Micropollutants in wastewaters, tertiary air pollutants as well as aerosols and PM 2.5 particulates have not been seriously addressed.
  - Management of urban services
  - Ship Dismantling, Mining of Sand, Aquaculture, Ports and Harbours, Tourism, Marine Outfalls etc
- # Need more technology and regulatory authority

⑨ Most developed cities are near marine, so they dumped their industrial waste there and we need to think how waste water is need to be treated i.e at what level before dumping it in marine.
